

Annual Drinking Water Quality Report

Madera County Service Area 2B & C

Wishon Cove – 2004

We're pleased to present to you this year's *Annual Drinking Water Quality Report*. This report is designed to inform you about the quality of water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to improve the water treatment and delivery process and protect your water resources. We are committed to ensuring the quality of your water.

The sources of drinking water (both tap and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or human activity.

Possible sources of contamination:

- *Microbial contaminants*, such as viruses and bacteria that may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife.
- *Inorganic contaminants*, such as salts and metals, that can be naturally-occurring or result from urban runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming.
- *Pesticides and herbicides*, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- *Organic chemical contaminants*, including synthetic and volatile organic chemicals, which are byproducts of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, and septic systems.
- *Radioactive contaminants*, which can be naturally occurring or be the result of oil and gas production and mining activities.

In order to ensure that tapwater is safe to drink, the U. S. Environmental Protection Agency (EPA) and the California Department of Health Services (DHS) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. DHS regulations also establish

limits for contaminants in bottled water that must provide the same protection for public health.

Maximum Contamination Limits (MCLs) are set at very stringent levels. To understand the risk of possible health effects for regulated contaminants, you should know that a person would have to drink two (2) liters of water every day for a lifetime at the MCL level to have a one-in-a-million chance of affecting their health.

All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at (800) 426-4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons, such as people with cancer undergoing chemotherapy, those who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly and/or infants, can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC (Center for Disease Control) guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline.

Your water is supplied from Bass Lake, which is fed from snow melt and stream runoff from the San Joaquin River watershed. Water is received through an underwater intake structure and treated

by filtration and disinfection before it is distributed. We are pleased to report that your drinking water meets all federal and state requirements.

If you have any questions about this report or concerning your water utility, please contact Linda Alexander at (559) 661-6333. We want our customers to be informed about their water utility.

The Madera County Engineering Department routinely monitors for contaminants in your drinking water according to Federal and State laws. Our tables show the results of monitoring for the period of January 1st through December 31st, 2004.

Results of Water Testing

The following tables present results of testing in 2004. Not all testing is reported here. We test for many chemicals that were not detected at a level high enough to be reported. Additionally, the State requires us to monitor for certain contaminants less frequently than once per year because the concentrations of these contaminants are not expected to vary significantly from year to year. The results shown are from the most recent testing and test dates are noted. If you have a specific question about a contaminant you do not see listed, we invite you to call our office.

In the table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level (AL) – the concentration of a contaminant, which, if exceeded, triggers treatment or other requirements that a water system must follow.

Maximum Contaminant Level (MCL) – the “Maximum Allowed” is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as is feasible using the best available treatment technology.

Maximum Contaminant Level Goal – the “Goal” (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Michromhos (μ MHO/cm) – a measure of the electrical conductivity of water.

Parts per billion (ppb) or Micrograms per liter (μ g/l) – one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

Parts per million (ppm) or Milligrams per liter (mg/l) – one part per million corresponds to one minute in two years or a single penny in \$10,000.

Picocuries per liter (pCi/L) – a measure of the radioactivity in water.

Public Health Goal (PHG) – the level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

Treatment Technique (TT) – a Treatment Technique is a required process intended to reduce the level of a contaminant in drinking water.

Turbidity Unit (TU) – a measure of the clarity of water. Turbidity in excess of 5 TU is just noticeable to the average person.

TEST RESULTS FOR PRIMARY CONTAMINANTS

Microbiological Contaminants							
Contaminant / Unit of Measurement	Violation Y/N	Level Detected	Range	MCL	PHG (MCLG)	Test Date	Likely Source of Contamination
Total Coliform Bacteria	N	0	0	More than 1 positive monthly sample	0	At least 1 test per month.	Naturally present in the environment
Disinfection Byproducts, Disinfectant Residuals, and Disinfection Byproduct Precursors							
Total Trihalomethanes (ppb)	N	15.4	15.4	80	n/a	8/04	Byproduct of drinking water chlorination
Total Halocetic Acids (ppb)	N	21	21	60	n/a	8/04	Byproduct of drinking water disinfection
Total Organic Carbon (ppm)	N	1.57	1.3-2	n/a	n/a	Monthly; 6/04-12/04	Various natural & manmade sources

Secondary standards have been set to protect against unpleasant aesthetic effects such as color, taste, odor and the staining of plumbing fixtures (e.g., tubs and sinks) and clothing while washing. These do not pose a risk to public health and communities may decide whether or not to treat for them.

Secondary Standard Contaminants							
Contaminant	Violation	Level Detected	Range	MCL	PHG (MCLG)	Test Date	Likely Source of Contamination
Color (Units)	No	<5	<5	15	N/A	5/04	Naturally occurring organic materials
Corrosivity	YES*	Highly Aggressive	Highly Aggressive	Non-Corrosive	N/A	5/04	Natural or industrially-influenced balance of hydrogen, carbon and oxygen in the water, affected by temperature and other factors
Specific Conductance (µMHO/cm)	No	30	30	1600	N/A	5/04	Substances that form ions when in water; seawater influence
Total Dissolved Solids (ppm)	No	33	33	1000	N/A	5/04	Runoff/leaching from natural deposits
Turbidity (TU)	No	.15	.15	5	N/A	5/04	Soil runoff

About our violation...

*Corrosivity, found to be Highly Aggressive in the Bass Lake water system can cause leaching of the copper, lead, or lead-soldered joints of plumbing systems. No treatment is planned at this time.

These **Unregulated Contaminants** may also be of interest to you. No MCLs, PHGs or MCLGs have been established.

Other Unregulated Contaminants...			
Contaminant	Test Date	Range	Result
Bromodichloromethane—ppb	All tests were performed on 5/11/04 & 8/12/04.	.8	.8
Calcium – ppm		2	2
Chloroform—ppb		14	14
Dibromochloromethane—ppb		.57	.57
Dichloroacetic Acid—ppb		8.6	8.6
pH		7.0	7.0
Sodium – ppm		3	3
Total Hardness (as CaCO ₃) – ppm	<20	<20	
Trichloroacetic Acid—ppb	13	13	

Summary:

As shown by the tables, the Wishon Cove system had no primary violations. We're proud that your drinking water meets or exceeds all Federal and State requirements for primary MCLs. Though we've learned through our monitoring and testing that some contaminants have been detected, the EPA has determined that your water IS SAFE at these levels.

Other Information

A source assessment was conducted for Wishon Cove, SA-2B. While no contaminants exceeding current MCLs were found, the assessment identified recreational activities on and around Bass Lake, the community sewer system and sewer line running under the lake, and motor vehicle traffic in the area as having the potential for outside contamination. A copy of the complete assessment may be viewed at the Madera County Environmental Health Department, by requesting a summary of the assessment from Environmental Health at (559) 661-6333, or by visiting www.dhs.ca.gov/ps/ddwem/technical/dwp/source_info/source_index.htm, the State's website.

In our continuing efforts to maintain a safe and dependable water supply, it may be necessary to make improvements to the water system. The costs may be reflected in the rate structure, because rate adjustments may be necessary in order to make these improvements.

We hope you find this report informative and helpful. Please call our office if you have questions. The County of Madera works continually to provide the best available water to every tap. We ask that you, our customers, help us protect our water sources. Water is the heart of our community, our way of life and our future.

WATER CONSERVATION ORDINANCE NO. 532

1. No outdoor water use between 12:00 noon and 5:00 p.m.
2. Even number addresses water Mondays, Wednesdays and Fridays.
3. Odd number addresses water Tuesdays, Thursdays and Saturdays.
4. Any address may water on Sunday during watering hours.
5. Hosing down paved driveway, sidewalks or paved parking lots is prohibited.
6. Restaurants are encouraged to serve water only upon request.
7. These restrictions shall be in effect each year between May 1st and October 31st.
8. Violations are subject to a \$100.00 fine per violation per day.

CONSERVACION de AGUA ORDENANSA NO. 532

1. Nada de uso de agua en las afueras de la casa, Entre las 12 medio día y las 5:00 p.m.
2. Riego de casas con dirección con número parejo son los Lunes, Miércoles y Viernes.
3. Casas con direcciones nonas podrán regar los Martes, Jueves y Sábados.
4. Todos podrán regar en Domingo a las horas señaladas para el riego.
5. Se prohíbe lavar con mangueras las entradas de residencia, las banquetas y lugares de estacionamiento.
6. Los Restaurantes se les recomienda de no servir agua, únicamente si es pedida.
7. Estas restricciones estarán en efecto cada año entre el 1o de Mayo y el 31 de Octubre.
8. Todos Violaciones están sujetas a una multa de \$100.00 por cada violación.
